

Background information about the web application

The application was designed and built using PHP 7, MySQL as the backend and HTML 5, CSS 3 and Javascript as the front end.

It also utilizes several JQuery UI components – Datepicker, Dialogs and Datatables, which have been integrated into the application.

The purpose of the application is to manage personal information about participants in the technical assistance program so that the tutors could easily see their details. It also stores booking information and captures customer feedback information.
